REPORT

RELATING TO THE REGISTRATION OF

BIRTHS, MARRIAGES AND DEATHS

IN THE

PROVINCE OF ONTARIO

FOR THE

YEAR ENDING 31st DECEMBER

1928

(BEING THE FIFTY-NINTH ANNUAL REPORT)

PRINTED BY ORDER OF
THE LEGISLATIVE ASSEMBLY OF ONTARIO

SESSIONAL PAPER No. 13, 1929

TORONTO:

REPORT

BIRTHS, MARRIAGES AND DEATHS

PROVINCE OF ONTARIO

YEAR ENDING 31st DECEMBER

CHOISE DAUNNA HENRY PERSONS

THE LEGISLATIVE ASSEMBLY OF ONTARIO

SESSIONAL PAPER No. 13, 1919

SIR:-

I have the honour to submit for your approval the Fifty-ninth Annual Report made in conformity with and under the provisions of the Act respecting the Registration of Births, Marriages and Deaths in the Province of Ontario, for the year ending December 31st, 1928.

I have the honour to be, Sir,

Your obedient servant,

Deputy Registrar-General.

To the Hon. Forbes Godfrey, Registrar-General of Ontario. To His Honour the Lieutenant-Governor of the Province of Ontario.

MAY IT PLEASE YOUR HONOUR:

I herewith beg to present for your consideration the Fifty-ninth Annual Report of the Registrar-General, relating to the Registration of Births, Marriages and Deaths in the Province of Ontario during the year 1928.

Respectfully submitted,

FORBES GODFREY,

Registrar-General of Ontario.

REPORT UPON

Births, Deaths and Marriages FOR THE YEAR 1928

Herewith is presented the Fifty-ninth Annual Report of Vital Statistics for the Province of Ontario.

POPULATION

The estimated population is 3,229,000, distributed as follows:

City municipalities	1,336,421 or 41.38 per cent.
Towns (over 5,000 population)	213,255 or 6.60 per cent.
Rural (including all other municipalities)	1.679.324 or 52.00 per cent.

ESTIMATED POPULATION BY AGE GROUPS

	T . 1	3.7.1	E . 1
	Total	Male	Female
	3,229,000	1,638,000	1,591,000

BIRTHS

	1928		1927	
	Number	Ratio	Number	Ratio
Province		21.2	67,671	21.2
Cities		23.6	30,393	
Towns		27.8	4,041	26.0
Rural	30,969	18.4	33,237	19.6

The rate per 100,000 of population remains unchanged and but 839 more births registered than in 1927.

NUMBER OF BIRTHS AND RATE FOR 10 YEARS

Year	Number	Ratio	Year	Number	Rato
1919	62,774	22.0	1924	71.510	23.3
1920	72,511	25.1	1925	70.122	22.6
1921	74,152	25.3	1926	67,617	21.5
1922	71,320	23.9	1927	67,671	21.2
1923	70,056	23.1		68.510	21.2

NATURAL INCREASE PER 1,000 OF POPULATION

			Natural					Natural	
Year	Births	Deaths	Increase	Ratio	Year	Births	Deaths	Increase	Ratio
1919	62,774	34,010	28,764	10.1	1924	71,510	33,078	38,432	12.5
1920	72,511	40,440	32,071	11.1	1925	70,122	33,960	36,162	11.6
1921	74,152	34,551	39,601	13.5	1926	67,617	35,909	31,708	10.0
1922	71,320	34,034	37,286	12.5	1927	67,671	34,775	32,896	10.3
1923	70,056	35,636	34,420	11.4	1928	68,510	37,128	31,382	9.7

The natural increase, i.e., the number of births over deaths, was 9.7 per 1,000 of population and is the lowest rate since 1918 when it was but 7.7.

ILLEGITIMATE BIRTHS

Rate per 1,000 living births.

Year	Rate	Year	Rate	Year	Rate	Year	Rate
1901	17.9	1908	14.9	1915	21.9	1922	21.2
1902	17.5	1909	13.7	1916	20.9	1923	22.5
1903	16.4	1910	19.3	1917	19.5	1924	24.2
1904	16.2	1911	19.4	1918	18.2	1925	26.8
1905	12.5	1912	21.3	1919	19.8	1926	26.9
1906	15.9	1913	21.6	1920	19.7	1927	28.9
1907	14.4	1914	22.1	1921	21.5	1928	31.7

The highest rate of illegitimacy occurred in 1928. The above table shows the rates for twenty-eight years. The increase in that period was 77 per cent.

STILL-BIRTHS

	Registered	Ratio per 1,000
Year	as Births	total births
1919	2,091	32.5
1920	2,495	33.3
1921	3,234	40.9
1922		41.8
1923	3,028	41.4
1924	2,594	34.9
1925		38.1
1926	2,812	39.9
1927	2,758	39.2
1928	2,793	39.2

PLURAL BIRTHS CLASSIFIED TO SHOW NUMBER OF CHILDREN BORN ALIVE AND STILLBORN BY SEX, 1928

CLASSIFICATION OF BIRTHS	Ontario
Cases of twins	
Two males (both living)	
One male and one female (both living)	264
Two females (both living)	226

Total confinements	

MARRIAGES

	1928				1927		
	Number		Ratio		Number		Ratio
Province	25,728		8.0	×	24,677		7.7
Cities	15,242		11.4		14,059		10.5
Towns	2,112		9.9		1,499		9.6
Rural	8,374		4.9		9,119		5.3

There were but 51 more marriages registered for 1928 than for 1927.

NUMBER AND RATIO PER 100,000 POPULATION FOR TEN YEARS

Year	Marriages	Ratio	Year	Marriages	Ratio
1919	26,328	9.2	1924		
1920	29,104	10.0	1925		
1921			1926		
1922			1927		
1923	24,842	8.2	1928	. 25,728	7.9

The average age for men was 28.9 years and for women 24.9 years.

The greatest number of marriages occurred at the ages of 24 for men and 21 for women.

DEATHS

	1928			1927	
	Number		Ratio	Number	Ratio
Province	37,128		11.5	34,755	10.9
Cities	16,999		12.7	15,784	11.0
Towns	3,101		14.5	2,043	13.1
Rural	17,028	٠.	10.1	16,948	9.9

There was an increase of 2,373 deaths registered over those registered in 1927. The rate rose from 10.9 to 11.5, being an increase of 0.6, and is the highest rate since 1926.

DEATHS AND RATE PER 1,000 OF POPULATION FOR TEN YEARS

Year	Deaths	Ratio	Year	Deaths	Ratio
1919	34,010 .	. 11.9	1924	33,078	10.8
1920	40,440 .	. 14.0	1925	33,960	10.9
1921	34,551	. 11.8	1926	35,909	11.4
1922	34,034 .	. 11.4	1927	34,775	10.9
1923	35,636 .	. 11.8	1928	37,128	11.5

Rates per 100,000 of population in round numbers of tens to enable calculation of rates not published, based on population for 1928.

10		60	1.858
20		70	2.168
30		80	
40		90	
50	1.548	100	3.096

To use—Example: 46 deaths.

rate for 40 = 1.238 + rate for 6 = .185 = 1.423.

Example: 129 deaths.

rate for 100 = 3.096 + rate for 20 = .619 + rate for 9 = .278 = 3.993.

TEN HIGHEST CAUSES OF DEATH IN EACH YEAR PER 100,000 OF POPULATION

					1					
	1919	1920	1921	1922	1923	1924	1925	1926	1927	1928

(k) Diphtheria										

Diagram showing changes in position of the ten chief causes of death over a period of ten years.

- a. Organic heart diseases.
- b. Pneumonia (all forms).
- c. Influenza.
- d. Tuberculosis (all forms).
- e. Cancer.
- f. Accidents.
- g. Apoplexy.
- h. Diseases of the arteries.
- i. Infantile diarrhoea (under two years).
- j. Bright's disease.
- k. Diphtheria.

It is interesting to note the changes in the ten chief causes. In 1919 cancer was holding fifth place. It began to climb and five years later, took second place, which it has held for the past five years.

Heart diseases hold first place in all the ten-year period; indeed for many years earlier than here shown these diseases have held this position and are not likely to be displaced for some time to come. Influenza is the only disease which superseded the heart affectations in this position. That was in 1918. during the famous "flu" epidemic. Its running-mate, in such circumstances, pneumonia, stood second in that year and indeed, held second place until 1923 when it dropped to the fourth position which it holds this year.

Tuberculosis has dropped from fourth to sixth place and its steady position here for the last four years indicates the need for continued warfare against this

insidious foe.

Accidents, while showing a fluctuation during the first six years of the decade are altogether too near the top. These being largely preventable should not be so high.

Diseases of the arteries show a spectacular rise from eighth to third place which it has maintained in four out of the five latter years of the decade.

Infantile diarrhoea and Bright's disease show great fluctuations and diphtheria appears but once as a "chief cause" in the decade.

CHANGES OF POSITION OF THE TEN CHIEF CAUSES OF DEATH BY AGE GROUPS

It will be noted at once, when analyzing the chief causes by age groups that certain causes appear in certain groups only and not in all. This is, of course, due to the susceptibility of those groups to certain causes. It will be just as interesting to note those which do appear in many or all and their relative positions as group is compared with group.

In the first group, out of a total of 4,880 infant deaths the causes listed carried off 90 per cent. of all deaths in that group. Pneumonia is the only cause in this group which appears in the others and it appears in all the other

groups.

It stands fourth "under 1" and first in "1 and 2" after which it falls back to fourth in "3 and 4" and in "5 and 6." From here on it stands in or close to the

middle of each group.

Influenza, being eighth in the first group follows pneumonia fairly closely into the "3 and 4" and the "5 and 6" groups, being separated from it by diarrhoea in the former and by tuberculosis in the latter groups. After these, influenza and pneumonia alternate for fifth and sixth places up to the "30-34" group and then pneumonia continues on to the end more fearful than influenza which fluctuates a good deal in the older age groupings.

Organic heart diseases manifest themselves in the "10 to 14" group and hold the fourth place in every group to the end of 34 years when they are more active moving to second place from 35 to 64 years. Then they appear as the chief

cause of death in all ages from 65 years onward.

Puerperal causes appear in the groups from 15 years to 44 years, but in the groups from 20 to 34 years in third place. This reflects strongly the need for education and instruction in respect to both pre and post-natal care. Puerperal causes in these groups really occupy second place since most accidents are to males. Indeed, 53 females only are reported from accidents in the three groups.

Diphtheria is active in all the younger groupings especially from 3 to 9 years

of age.

Whooping-cough appears in ages from birth till the age of four years is passed, while scarlet fever makes itself felt from 3 to 9 years of age.

Typhoid fever appears in only one grouping, viz.: "15 to 19." Whether this is due to the thoughtlessness of youth linked with youth's daring which both

manifest themselves in these ages would be interesting to know.

Tuberculosis soon makes its impression. Beginning with the "1 and 2" group it steadily advances until the age of 14 is passed, when it breaks into fury and slays in large numbers at the best and most hopeful ages of life, holding first place from 15 to 34 years, and taking its terrible toll out of the "20-24" group. That there is a steady general decline indicates that the health officials all over the province are keenly alive to its dangers.

Accidents makes its first appearance in the "1 and 2" group. The ages of learning to walk. Strangely, this cause disappears until the approach of active youth is reached, "15 to 19." This group includes the age of beginning work and accidents attains second place, which it maintains through young manhood that is, to the end of 34 years. Apparently men and women are beginning to learn how to take care of themselves for there is a slight drop. When full maturity is reached accidents ceases to be so effective and continues downward as a cause to the last group, but still holds a position which points to the need of education in respect to the avoidance of accidents.

Appendicitis is a cause in all groups from 3 years to 44 years, and is most prominent from 5 to 19 years.

INFANT MORTALITY

The number of deaths of children who died before completing the first year of life was 4,880, and, while the next smallest number in the decade, the rate per 1,000 living births is 0.2 higher than last year.

COMMUNICABLE DISEASES

The following table shows the number of deaths and rate per 100,000 of population for the communicable diseases:

	19	19	19	920	19	21	19	22	19	23	19	24	19	25	19	26	19	27	19	28

cough Diphtheria	164 475 2522		745	13.0 25.7 113.4	653	10.5 22.2 17.3	411	6.7 13.7 32.2	316	10.5 10.4 19.3	322	4.7 10.5 18.0	251	8.7 8.0 32.3	227	7.8 7.2 50.4	297	5.6 9.3 30.0	213	5.4 6.5 52.9

Among the communicable diseases typhoid fever has again touched the low spot it reached in 1926 which was the lowest ever attained.

Smallpox, too, reached its lowest point ever attained there being but two deaths reported in the year.

While deaths from measles are lowest since 1921, in 1919 there were just about half the number of deaths as compared with this year.

Deaths from scarlet fever are the smallest in number during the decade. Whooping-cough is lowest since 1923.

Diphtheria has reached the lowest point ever attained.

Influenza is up about 73 per cent. over 1927, but still did not reach an alarming rate.

TUBERCULOSIS

DEATHS IN ONTARIO FROM TUBERCULOSIS BY AGES 1919-1928

Year	Total	Ratio per 100,000	0-1	Jnde	er 5	year 3	4	5-9	10-14	15-19	20-29	30-39	40-49	50-59	69-09	70-79	80 and over	Not stated	Total deaths from all causes.

It will be noted that the death rate from tuberculosis is still down to a point which indicates the influence of the preventive measures against it by the health authorities. The greatest drop in the rate appears as between the years 1923 and 1924 and there has been no rise. There is no let up, however, to combating its ravages, which takes place especially among the youth of the land.

The number of deaths from maternal mortality was 396, with a rate of 5.55 per 1,000 total births—including still births. This number of deaths has been exceeded three times during the decade, viz., 1920, 1924 and 1927. The rate is higher in the urban municipalities by nearly 122 per cent. than it is in the rural municipalities and yet it is these urban centres that are presumably better equipped with hospitals and skilled physicians than the rural municipalities.

The table showing the number of deaths from puerperal causes, compared with the number of living births taking place in institutions and in the homes shows a preponderatingly larger number of deaths per 1,000 births in the institutions than out of them. The table is worthy of a close study.

The number of deaths from accidents was 2,355, and the rate was 72.90 death for each 1,000 of the population. This represents an increase of 17.8 per cent. over the rate for 1928. It will be noted that burns, as a cause, shows the largest increase, falls are second, drowning third, and automobiles fourth, contrary to the general belief that they are the greatest accident menace of the day. Railroads came fifth and there was a slight decrease in the number of deaths from all other types of accidents combined.

Suicides as a cause are not shown in the above, although an external cause of death. There were, however, 285 during the year, 207 being males and 78 females. The largest number in any one age group was 27 males, 50-54 years, and 14 females, 25-29 years.
